Samar, Philippines: new well for village
La Ladrillera, Perú: new well for community

India: neighbourhood water pump
Haiti: only source of water for village
When we want water, all we have to do is take a few steps and we have it - cool, safe water, right? For many children in developing countries it is much more difficult. Frequently, the water source for a whole community is only a well, a lake, a river, or even a swamp that may be polluted or contain diseases and parasites. Often, they must go far and carry heavy buckets of water, every day, which often means there's no time for school, homework, or farming.

- Every minute a child dies of water-related disease.
- Over 884 million people have no access to safe water.
- Water-related diseases and parasites affect more than 1.5 billion people every year.
- Approximately 80% of all illnesses in developing countries are caused by poor water and sanitation conditions.
- Less than 50% of primary schools in developing countries have adequate water.

Providing SAFE water to a community isn’t just about giving people a cool drink. It gives real people their health and their lives. Raise money to bring a safe source of clean water to a whole community.

Orissa, India: school feeding program

Pochaiv, Ukraine: school lunch program

Andres Giron, Guatemala community dining hall and lunch program
HOPE for Nutritious Food

Our food gives us nutrients to grow, energy to work, play, think, and learn. In developing countries, many ordinary foods are too expensive or not available, causing many to go without proper meals. Hungry children are lethargic, are unable to learn, and get sick easily. Even though the world produces enough food for everyone:

- 25,000 people die each day of hunger – 1 person every 3.5 seconds.
- over 800 million people do not have enough food to eat – that’s 1 out of 9.
- 98% of the world’s hungry live in developing countries.
- 2 out of 3 people in Asia and 1 out of 4 people in Africa are undernourished.
- 3.1 million deaths of children under five are caused by poor nutrition.
- 100 million (1 out of 6) children are underweight in developing countries.

You can raise money to help hungry children. Every dollar will give real kids real meals every day.

You can raise money to help hungry children. Every dollar will give real kids real meals every day.
Mbinga, Tanzania: well-baby check-up

Pinife, Peru: health check-up

Orissa, India: health check-up

Haiti: clinic waiting room
In many developing countries there are often no doctors or they are too expensive. This means illnesses or infections that are usually easy to treat can cause disability or death to children. Lack of vaccinations, no affordable check-ups or medicines endanger thousands of lives every year.

- Every day, 17,000 children die, mostly from preventable or treatable causes.
- An estimated 18.7 million infants worldwide do not receive basic vaccines.
- In 2015, 212 million got malaria; 429,000 died - 70% were children under 5.
- Over 95% of tuberculosis cases and deaths are in developing countries.
- In 2014, 9.6 million got tuberculosis - 1 million were children; 1.5 million died - 140,000 were children.
- Every 2 minutes, a child under five dies of an AIDS related illness; there are 1,500 new infections in children every day.
- In 2015, 36.9 million people were infected with HIV worldwide.

Help raise funds to provide proper healthcare to children in developing countries.

HOPE for Quality Education

We all know that getting a good education is our key to a bright future. But there are many children in the world who can’t go to school, even though they desperately want to. Sometimes the school costs too much, is too far away, or overcrowded. Some children can’t go because they must work to help support their family. Girls, minorities, and those with disabilities are less likely to go. Most importantly, education gives kids hope for their futures. Hopelessness turns into exciting possibilities when a child is educated.

- Nearly 1 billion people in the world are unable to read or sign their name.
- 60.7% of the world’s illiterate are female.
- 1 in 4 young people in the developing countries are unable to read a sentence.
- 59 million children in developing countries do not have access to basic education.
- In sub-Saharan Africa, only 25% of school aged children actually attend school.

Let us contribute to giving children in need hope for a brighter future through education.
